### A feature-rich solution specifically designed for Hydropower Licensees, Real Estate Divisions and issuing agencies for Shoreline Facilities Permits.

The Adept Permit Management software system is a feature-rich solution specifically designed for Hydropower Licensees, Real Estate Divisions and issuing agencies for Shoreline Facilities Permits. The system streamlines Shoreline Management operations, providing easy access to shoreline facilities permit data and complete integration with GIS maps for accurate information on demand.

The Adept Shoreline system is an automated, web-based shoreline management tracking software program. It allows Shoreline Management Divisions to transfer, reissue and create records for Permits, Complaints, Violations and Pre-Applications and to track shoreline facilities permit transaction history on specific parcels of land.

End-users can easily process boat dock and seawall modification applications and search existing permit records for transfers of ownership. Adept's enhanced workflow system automates each task, accelerating the approval process for reviews and inspections. This innovation allows activities to be coordinated between multiple departments.

*"The Adept Shoreline Management GIS system has become an invaluable tool for the SMO that is 'light years' ahead of the old system."*

*Jeff Green  
Ameren Supervisor, Shoreline Management*

ADEPT

# SHORELINE

Permit Management Software

**Reduces Permitting Time,  
Staff Workload & Costs.**

**Improves Record Keeping &  
Enhances Communication.**

**Increases Productivity.**

**Improves Customer Service.**

## Generate and Track Shoreline Facilities Permits

The Adept Shoreline system automates the issuance of permits or licenses, in compliance with SMP guidelines. This system drastically reduces paperwork, easily tracking existing and approved permits, permit modifications, transfers of ownership and certified dock builders. Data including scanned property owner applications, photos, historic records, reviewer comments, document templates and alerts are easily accessible by multiple departments from a centralized source.

## Automate the Permit Process and Workflows

Shoreline Managers leverage the Adept Shoreline system to centralize and automate processes that were formerly paper-based, increasing productivity while reducing errors and related costs. A key feature of the Adept solution is Dynamic Workflow Automation that allows multiple users to track and manage tasks and permit process timelines. Supervisors and property owners are instantly informed on the status of open permits and violations.

## Reporting Tools

The Adept Shoreline system's powerful reporting capabilities provide easily generated analysis of appropriate shoreline use, environmental impact, violation history for legal departments and trend monitoring for future public recreation demand and facility needs.

## Consolidate Multiple Databases

Adept eliminates redundant work processes and creates one centralized permitting system, consolidating previously separate databases in multiple locations. Data sources include Tax Assessor data, Address, Parcel and Owner information, Certified Dock Builders, scanned property owner permit applications, legacy data, GIS mapping and scanned historic documents.

## GIS Integration

Existing GIS systems can interface directly with Adept's Shoreline solution. GIS captures and displays parcel modifications into map layers. Visual maps of parcel and facility information such as property boundaries, contours, historic properties, Lake Mile markers are linked to county property data, and much more.

## Future Expansion

Adept offers end to end customization to meet the unique and growing needs of our customers. The Adept Shoreline system can be configured to provide online permitting features allowing property owners to download permits issued via the Internet for added convenience and cost savings.
