Adept Code Enforcement Module

The Adept Code Enforcement Module is a powerful, software application that is easy to use and customized to fit your department's unique Code Enforcement processes.

Adept Enterprise – Code Enforcement Module

The Adept Code Enforcement module provides powerful tools for tracking and managing citizen complaints, violations and code enforcement activities using a comprehensive audit trail from the initial stages through final case resolution.

An Industry First: A.I. Enhanced Workflow

The Adept Workflow module allows Code Enforcement officers to track violations and access their daily tasks and assigned inspections from their personal Dashboard, which can be accessed remotely while they are onsite.

Photos and Documents - in the field

Inspection staff can quickly view the history of each violation along with inspection dates and actions taken. Photographs and documents can be attached as evidence of violations with each case history. Inspection deadline alerts, violation notices and case hearing documentation can be generated automatically.

The Code Enforcement module is integrated with the Adept Enterprise Building and Planning modules allowing the system to flag all linked parcel and address records and alert staff of unresolved violations and liens against the property.

Adept Enterprise Features

- Advanced Encryption Standard
- Unique, secure login sessions
- Unauthorized access attempts are redirected, tracked, and blocked
- Keystroke input scrambling
- Flexibility to secure one or more sites or individual web pages
- Instant attack alerts and intrusion-attempt alerts
- Malware monitoring and protection
- Eliminates costly software products that do not work

CodeEnforcement

WITH ADEPT ENTERPRISE

Changes and updates can be easily made to case and inspection types, violation fees, account codes, approvals and workflows that do not require IT support.

Set up code enforcement workflow reminders for staff to be alerted of review timelines, send email notifications when deadlines are approaching and automatically print progress reports.

Internet access is available for complaints, violations, inspection status, and inspection requests.

Seamless integration with your GIS systems.

Set up conditions and warning flags on all records to prevent the issuance of permits, final Inspections, COs and CC's.

Fully integrated cashiering and Trust Accounting.

Flexible query capability for standard and ad hoc reports based on user-defined criteria.

Each complaint and violation stores electronic files and images that are associated with complaints, inspections, and violations.

Generate daily inspection schedule for each inspector by geographic area and type of Inspection.
